

# 2019-2020 Humanities Center Brown Bag Series

## Race, Religion and Environmental Policy Attitudes

Using four national probability studies between the years of 2010 and 2015, this study examines how religious beliefs help explain American support for or opposition to governmental efforts to protect the environment. We do so by investigating how race moderates this relationship. We find that religious beliefs associates with and likely informs the environmental policy attitudes of Non-Hispanic Whites. We have less evidence that the same holds true for Hispanics and Blacks.
